Impact Wall System

A non-insulated interior and exterior wall system applied directly to the existing substrate.

WHERE TO USE
Over CMU, concrete, brick and stucco.

Performance Characteristics
Impact and Fire Resistant
Fiber-reinforced base coat has high tensile and flexural strengths.
Durable
Resistant to weathering action, excellent freeze/thaw stability and abrasion resistance.
Attractive
Provides the appearance of EIFS. A wide variety of decorative coatings, finishes and colors offer design flexibility.
Waterproof Barrier
Provides a waterproof wall. Passes ASTM E514.
Air Barrier
Stops air and water. Prevents passage of liquid and vapor phase water.
Breathability
Allows moisture to diffuse, preventing damage from moisture build-up in the wall system.
Anti-carbonation Barrier
Mitigates carbonation of concrete.
Versatile
Use for both exterior and interior applications.

Surface Preparation
Remove loose and deteriorated material, laitance, dirt, dust, oil and any surface contaminants that will inhibit proper bond. Repair spalled areas, static cracks and voids with Conpro Set or Structural Skin. Substrate should have open-pored and textured surface. Apply Conpro Start where a consolidant is of benefit.

Saturate substrate with clean water, (saturated surface dry/SSD). Wall should be wet when Structural Skin is applied. For best results on concrete, grind or abrasive blast (CSP 3). Refer to ICRI Surface Preparation Guide 03732 for information about Concrete Surface Preparation (CSP).

All detailing must be designed prior to the installation of the wall system. This includes all joint construction and any projections through the system. Expansion joints will be installed where joints occur in the substrate. Control joints are needed where the system abuts other materials and where there are changes of the substrate and plane. A test panel is always recommended to ensure compatibility, color and texture.

Trim Accessories
Optional:
Fasten joint and trim accessories (Plastic Components) to the substrate mechanically, or with an adhesive.

Stop Bead #1025 is applied to top and bottom of walls, windows, expansion joints and other openings.
Corner Bead 1A is applied to the corners.
Control Joint #2025 (surface mounted) is used within the area to create panels. All vertical joints need to be continuous, with breaks occurring at the horizontal joint (T-intersections). Do not overlap accessory joints. Set each accessory butt joint in silicone sealant.

Priming
No priming is required under normal circumstances.

Mixing
Refer to the individual data sheets.

Application
Base Coat
At the time of application, surfaces should be saturated surface dry (SSD) but hold no standing water.
Apply Structural Skin (modified with K-88 Admix) with a stainless steel trowel to a thickness of 1/8 - 1/4 inches.
Allow to set to a thumbprint. Cover the entire wall panel without stopping. Trowel smooth to provide a surface receptive to the finish coat.
Apply additional coat at 1/16 - 1/8 inches to achieve a level plane, where desirable. Alternate base coat is Conpro One Coat.

Finish
Apply Conpro Flex with a stainless steel or flat resin trowel, angled at approximately 30 degrees to the substrate. Apply using a firm, steady, continuous upward motion. Apply only as much material as can be finished before initial film is formed (approximately 10 minutes @ 70°F, 50% RH). Work to natural or artificial break points to prevent cold joints. Always keep a wet edge. Finish Classique and Contemporary textures using a circular motion. Baroque is finished in a manner similar to traditional stucco – freestyle.
**Impact Wall System**

Alternative finishes include: Conpro Stucco, Conpro Lastic, Color Coat and Super Color Stain. Alternatively, apply ProMasonry Cure & Seal.

**Additional**
Refer to PCA’s Plaster and Stucco manual for detailed design and installation information.

**Product Handling**

**Packaging**
Refer to the individual data sheets.

**Shelf Life**
12 months when properly stored.

**Storage**
Transport and store in cool, clean, dry conditions in unopened containers. High temperature or high humidity will reduce shelf life.

**Health and Safety**

Product is alkaline.
Do not ingest.
Avoid breathing dust.
Avoid contact with skin and eyes.
Refer to Safety Data Sheet (SDS) for additional information.

**Curing**
Refer to the individual data sheets.

**Clean Up**
Clean tools and equipment with water immediately after use. Cured material must be removed mechanically.

**Coverage/Yield**
Refer to the individual data sheets.

**Limitations**
Do not apply unless substrate and ambient temperature can be maintained at a minimum of 40°F for 24 hours. Refer to ACI Cold Weather Application Guidelines. Do not apply to frozen surfaces. Protect each application from precipitation, as per data sheets. All details must be in accordance with the applicable Conproco Exterior Wall System specification. Protect each application from freezing. Keep all products off of floor, under cover and out of direct sunlight. Protect application from precipitation and high wind for at least 8 hours.

**First Aid**
In case of skin contact, wash thoroughly with soap and water. For eye contact, flush immediately with a high volume of water for at least 15 minutes and contact a medical professional. For respiratory problems, remove person to fresh air.

**Disposal**
Dispose of material in accordance with local, state and federal regulations.
